

KALAHARI

A SPECIAL DESIGN WITH SOFT CURVED SHAPES WE HAVE DESIGNED AN ADJUSTABLE BACKREST SYSTEM FOR TWO DEPTHS

One of the major developments of this collection is model KALAHARI, a modular programme with a very special design, without button effect on the backs and with soft curved shapes inspired by the desert dunes. The combination options are endless, and totally different from what we currently have.

Nowadays, we find that many living rooms have an elongated shape. The market only offers relax systems or standard sofas with chaise longue which limits the space in the room.

The new Kalahari model offers curved shapes and mid length modules, which bring more space to straighten the legs, sit down with your feet up, or sit down with your legs crossed. We claim that this new type of mid length chaise longue offers great comfort. The medium chaise units "K" and "H" are our individual medium chaises, while "MB" and "MBX" are the larger versions.

If there is one feature to point out for our Kalahari model, it is its curved shape. We would like to present different curved modules ("L", "V", "VX" and "W"), as well as a very unique corner ("R").

Just like anything else at Fama, it has a hidden innovation, which does not affect the aesthetics and brings new features. We have designed an adjustable backrest system for two depths.

As you all know, family members usually have different preferences and needs when it comes to seating. Even for the same person, the sofa is a piece which we use for different purposes, and there are certain activities which require more upright postures than others.

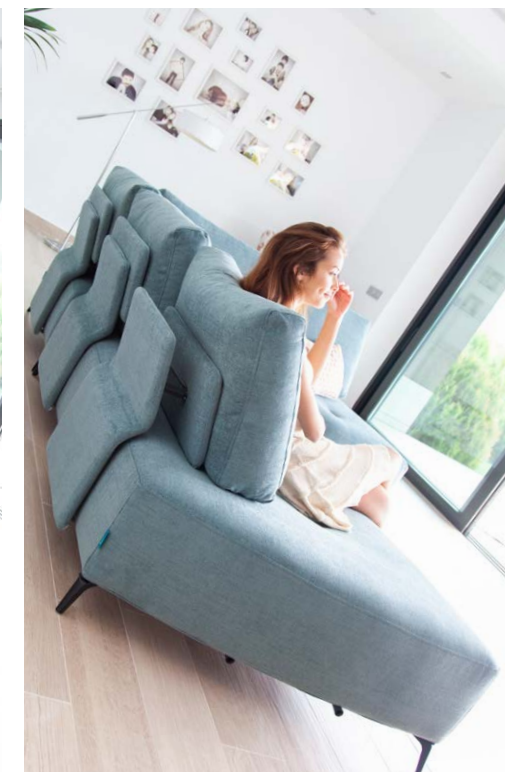

Thanks to this smart adjustable backrest system, you can have two different depths in one sofa. A new extra-flat hidden mechanism created by Fama along with the new seat shapes, which offer new solutions to the market.

Last but not the least, Kalahari has removable covers. We use the same system as Klee and Arianne Plus models.

We would like to point out that most of the removable cover options which are found on the market, use the hook side of the Velcro for covers and hold it directly to the sofa frame. But thinking about the durability of the covers, this is a mayor mistake. As when you wash the covers, if you do not protect the hook side of the Velcro, the covers get easily damaged.

In order to avoid this, we place the loop side of the Velcro in the cover, and the hook side in the hidden part of the sofa frame for all our models with removable covers.
