

This is how Korinto&Luxor were born, two new modular programmes with a very light line, thanks to their high legs and extra-thin bases. **The back cushions no longer have the roller, but they are thicker**, and the interiors are made with a **new high-quality fibre** that offers a comfort difficult to beat.

The backrests are the same width as the seats; in this aspect it differs from Tempo whose back cushions are narrower than the seats.

As in the Tempo model, in Korinto&Luxor we also have two different module depths.

KORINTO & LUXOR

“Two new models with a very light line, thanks to their high legs and extra-thin bases”

During the design process of Tempo, we realised that the possibilities were endless simply by changing backrests, arms, bases, etc. Therefore, starting from the same concepts, we developed two new corner sofas with the same construction, but following the trend that is currently taking place, and that we did not have covered in our catalogue, of **sofas with SUPER soft seats**.

We simply had to add a new fibre core to the seat, and this way, we managed to further increase the difference between the softest “super-soft” position and the hard position.

KORINTO

The design of the armrest is identical in shape to the back support, but the height is 15cm lower. This way we have an elegant and more conventional sofa construction.

LUXOR

It has a low arm to which we have made a circular cut-out in the front. A special design that gives the model an exclusive touch.

“NEW LEG”

In addition to the metal leg options both in polished aluminum and anthracite colours, there is the option of producing these models with a gold metal leg that gives them a much more retro look.

This leg will also be available in wood, in natural, walnut, wenge and black colours.

Sofas with extra soft seats
“Super-soft”

KORINTO & LUXOR

Since the Korinto&Luxor base has a minimum thickness, it is not possible to apply the motorised hardness regulation system, only the manual version can be used.

Due to the design of the arms and backrests, the base, arms, and backrest support covers are not removable in the standard version. Exceptionally, these models can be manufactured in a 100% removable covers version.

In both models, for the assembly it is necessary to use Allen screws and an Allen key either manual or coupled to an electric screwdriver.
